

## Robert König: with the help of block-technologies, the countries will bring monetary policy management to a new level

04/23/2018 10:11 AM

Technology blockade does not cease to be a matter of controversy. Is it possible to use this technology at the state level, as well as the creation of a sovereign crypto currency based on the blockbuster platform?

The topic of the day for Stolitsa.ee portal was commented on by financier, founder of the Xentavo block-platform, Robert König:

"Technology is moving forward. Once upon a time, the Internet was something exotic. Specialists working in the conservative sectors do not trust the blockade, but the specificity of the platform is that these technologies are absolutely transparent, and therefore safe. Things change, and you should look forward. Xentavo, for example, is a white blockbuster platform, which indicates its reliability and unambiguity.

Xentavo - the newest system, aimed at the introduction of crypto-currencies in small states. With the help of Xentavo, countries will be able to bring monetary policy management to a new level. The main feature of this platform - the system is controlled directly by the government and the Central Bank, which is an innovation, because Block-platform platforms do not have centralized control. Estonia is also on the list of countries considered as a potential user of this network. The use of a block-platform for the conduct of the state's financial policy and the creation of its own digital currency will help to gain monetary sovereignty. This is the path to a strong economy and independence. When making, for example, an international transfer, there can be certain difficulties, the blocker will make this procedure more secure and transparent. The most attractive qualities of this technology are the inability to change data, security and cost reduction, because when using crypto currency, means are not required to create, store and transport paper money.

Sovereign Crypto-currency also contributes to the rapid mobilization of funds in the event of an economic catastrophe: you can increase the money supply in a very short time. Many small countries lack resources, they simply do not have the money. The situation in Estonia is, of course, better. It is part of the European Union, but there are other countries that do not cooperate with large states, for example, the Caribbean. "
